

Emacs 26 特性

aborn

2018-06-21

Contents

1	本文档说明	1
2	Emacs 26.2 安装变化	1
2.1	使用'--with-xwidgets' 参数构建 Emacs 需要依赖 WebKit2 . . .	1
3	Emacs 26.2 中特殊模式和包的变化	2
3.1	Gnus	2
3.2	Shell 模式	2
3.3	VC	2
3.3.1	新 vc-hg 选项	2
3.3.2	Mercurial 版本在 mode-line 的显示变化	2
4	Emacs 26.1 安装变化	3
4.1	默认情况下编译 Emacs 需要 libgnutls 这个库	3
4.2	GnuTLS 版本需要 2.12.2 或者更高版本	3
4.3	The new option 'configure --with-mailutils' causes Emacs to rely on	3
4.4	The new option 'configure --enable-gcc-warnings=warn-only' causes	3
4.5	When GCC warnings are enabled, '--enable-check-lisp-object- type' is	3
4.6	The Emacs server now has socket-launching support. This allows	3
4.7	A systemd user unit file is provided. Use it in the standard way:	4
4.8	New configure option '--disable-build-details' attempts to build an	4
4.9	Emacs can now be built with support for Little CMS.	4

4.10	The configure option '--with-gameuser' now defaults to 'no', .	4
4.11	Emacs 不再对 IRIX 系统做支持	4
5	Emacs 26.1 启动的变化	4
5.1	新增 '--fg-daemon' 选项	4
5.2	新增 '--module-assertions' 选项	5
5.3	Emacs now supports 24-bit colors on capable text terminals. .	5
5.4	Emacs 在启动的时候遵守 X 资源 "scrollBar"	5
6	Emacs 26.1 的变化	5
6.1	'buffer-offer-save' 添加新值	5
6.2	Security vulnerability related to Enriched Text mode is removed.	5
6.2.1	Enriched Text mode does not evaluate Lisp in 'display' properties.	5
6.3	Functions in 'write-contents-functions' can fully short-circuit the	6
6.4	New variable 'executable-prefix-env' for inserting magic signatures.	6
6.5	The variable 'emacs-version' no longer includes the build number.	6
6.6	Emacs now provides a limited form of concurrency with Lisp threads.	6
6.7	The new user variable 'electric-quote-chars' provides a list . .	7
6.8	The new user option 'electric-quote-context-sensitive' makes .	7
6.9	The new variable 'electric-quote-inhibit-functions' controls when	7
6.10	The new user variable 'dired-omit-case-fold' allows the user to	7
6.11	Emacs now uses double buffering to reduce flicker when editing and	7
6.12	The customization group 'wp', whose label was "text", is now	8
6.13	The new function 'call-shell-region' executes a command in an	8
6.14	The new user option 'shell-command-dont-erase-buffer' controls	8
6.15	The new user option 'async-shell-command-display-buffer' controls	8
6.16	New user option 'mouse-select-region-move-to-beginning'. . .	8
6.17	New user option 'mouse-drag-and-drop-region'.	8
6.18	The new user option 'confirm-kill-processes' allows the user to	9
6.19	'find-library-name' will now fall back on looking at 'load-history'	9
6.20	Faces in 'minibuffer-prompt-properties' no longer overwrite properties	9

6.21	The new variable 'extended-command-suggest-shorter' has been added	9
6.22	icomplete now respects 'completion-ignored-extensions'. . . .	9
6.23	Non-breaking hyphens are now displayed with the 'nobreak-hyphen'	9
6.24	Approximations to quotes are now displayed with the new 'homoglyph'	9
6.25	New face 'header-line-highlight'.	9
6.26	'C-x h' ('mark-whole-buffer') will now avoid marking the prompt	10
6.27	'fill-paragraph' no longer marks the buffer as changed unless it	10
6.28	The locale language name 'ca' is now mapped to the language	10
6.29	'align-regexp' has a separate history for its interactive argument.	10
6.30	The networking code has been reworked so that it's more . .	10
6.31	'make-network-process' and 'open-network-stream' sometimes allowed	10
6.32	It is possible to disable attempted recovery on fatal signals. .	11
6.33	File local and directory local variables are now initialized each	11
6.34	A second dir-local file (.dir-locals-2.el) is now accepted. . . .	11
6.35	Connection-local variables can be used to specify local variables	11
6.36	International domain names (IDNA) are now encoded via the new	11
6.37	The new 'list-timers' command lists all active timers in a buffer,	11
6.38	'switch-to-buffer-preserve-window-point' now defaults to t. . .	12
6.39	The new variable 'debugger-stack-frame-as-list' allows displaying	12
6.40	Values in call stack frames are now displayed using 'cl-prin1'.	12
6.41	NUL bytes in text copied to the system clipboard are now replaced with "\0".	12
6.42	The new variable 'x-ctrl-keysym' has been added to the existing	12
6.43	New input methods: 'cyrillic-tuvan', 'polish-prefix', 'uzbek-cyrillic'.	12
6.44	The 'dutch' input method no longer attempts to support Turkish too.	12
6.45	File name quoting by adding the prefix "/:" is now possible for the	12
6.46	The new variable 'maximum-scroll-margin' allows having effective	13
6.47	Emacs can scroll horizontally using mouse, touchpad, and trackbar.	13
6.48	The default GnuTLS priority string now includes %DUMBFW.	13

6.49	Emacsclient changes	13
6.49.1	Emacsclient has a new option '-u' / '-suppress-output'.	13
6.49.2	Emacsclient has a new option '-T' / '-tramp'.	13
6.49.3	Emacsclient now accepts command-line options in AL- TERNATE_EDITOR	13
6.50	New user option 'dig-program-options' and extended func- tionality	14
6.51	'describe-key-briefly' now ignores mouse movement events. . .	14
6.52	The new variable 'eval-expression-print-maximum-character' prevents	14
6.53	Two new commands for finding the source code of Emacs Lisp	14
6.54	The new variable 'display-raw-bytes-as-hex' allows you to change	14
6.55	You can now provide explicit field numbers in format specifiers.	14
6.56	Emacs 支持在 Buffer 里显示行号 (可选项)	14
6.57	添加'arabic-shaper-ZWNJ-handling' 用户选项用来处理 Ara- bic 文本渲染中的 ZWNJ 问题	15
7	Emacs 26.1 中编辑操作的变化	15
7.1	新加变量'column-number-indicator-zero-based'.	15
7.2	New single-line horizontal scrolling mode.	15
7.3	New mode line constructs '%o' and '%q', and user option . .	15
7.4	Two new user options 'list-matching-lines-jump-to-current- line' and	15
7.5	The 'occur' command can now operate on the region.	16
7.6	New bindings for 'query-replace-map'.	16
7.7	'delete-trailing-whitespace' deletes whitespace after form feed.	16
7.8	Emacs no longer prompts about editing a changed file when the file's	16
7.9	Various casing improvements.	16
7.9.1	'upcase', 'upcase-region' et al. convert title case char- acters	16
7.9.2	'capitalize', 'upcase-initials' et al. make use of title- case forms	16
7.9.3	Characters which turn into multiple ones when cased are correctly handled.	16
7.9.4	Greek small sigma is correctly handled when at the end of the word.	16
7.10	Emacs can now auto-save buffers to visited files in a more robust	17
7.11	New behavior of 'mark-defun'.	17

7.12	New command 'replace-buffer-contents'	17
7.13	New commands 'apropos-local-variable' and 'apropos-local-value'	17
7.14	More user control of reordering bidirectional text for display.	17
7.15	New variable 'x-wait-for-event-timeout'	17
8	Emacs 26.1 中特殊模式和包的变化	18
8.1	Emacs 26.1 采用 Org 9.1.6 版本.	18
8.2	新函数 cl-generic-p	18
8.3	Dired 的变化	18
8.3.1	You can answer 'all' in 'dired-do-delete' to delete recursively all	18
8.3.2	Dired supports wildcards in the directory part of the file names.	18
8.3.3	You can now use '¿' in 'dired-do-shell-command'	18
8.3.4	A new option 'dired-always-read-filesystem' defaulting to nil.	18
8.3.5	Users can now customize mouse clicks in Dired in a more flexible way.	18
8.3.6	In wdired, when editing files to contain slash characters,	18
8.3.7	'W' is now bound to 'browse-url-of-dired-file', and is useful for	19
8.3.8	New variable 'dired-clean-confirm-killing-deleted-buffers'	19
8.4	html2text is now marked obsolete.	19
8.5	smerge-refine-regions can refine regions in separate buffers.	19
8.6	Info menu and index completion uses substring completion by default.	19
8.7	The ancestor buffer is shown by default in 3-way merges.	19
8.8	T _E X: Add luatex and xetex as alternatives to pdftex	19
8.9	Electric-Buffer-menu	19
8.9.1	Key 'U' is bound to 'Buffer-menu-unmark-all' and key 'M-DEL' is	19
8.10	hideshow mode got four key bindings that are analogous to outline	19
8.11	bs	19
8.11.1	Two new commands 'bs-unmark-all', bound to 'U', and	19
8.12	Buffer-menu	20
8.12.1	Two new commands 'Buffer-menu-unmark-all', bound to 'U' and	20
8.13	Checkdoc	20

8.13.1	'checkdoc-arguments-in-order-flag' now defaults to nil.	20
8.14	Gnus	20
8.14.1	The ~/.newsrsrc file will now only be saved if the native select	20
8.14.2	A new command for sorting articles by readedness marks has been	20
8.14.3	In 'message-citation-line-format' the '%Z' format is now the time	20
8.15	Ibuffer	20
8.15.1	New command 'ibuffer-jump'.	20
8.15.2	New filter commands 'ibuffer-filter-by-basename', . . .	20
8.15.3	Two new commands 'ibuffer-filter-chosen-by-completion'	20
8.15.4	The commands 'ibuffer-pop-filter', 'ibuffer-pop-filter-group',	21
8.15.5	The data format specifying filters has been extended to allow	21
8.15.6	A new command 'ibuffer-copy-buffernam-as-kill'; bound	21
8.15.7	New command 'ibuffer-change-marks'; bound to '* c'.	21
8.15.8	A new command 'ibuffer-mark-by-locked' to mark . .	21
8.15.9	A new option 'ibuffer-locked-char' to indicate	21
8.15.10	A new command 'ibuffer-unmark-all-marks' to unmark	21
8.15.11	A new command 'ibuffer-mark-by-content-regexp' to mark buffers	21
8.15.12	Two new options 'ibuffer-never-search-content-name' and	21
8.16	Browse-URL	22
8.16.1	Support for opening links to man pages in Man or WoMan mode.	22
8.17	Comint	22
8.17.1	New user option 'comint-move-point-for-matching-input' to control	22
8.17.2	New user option 'comint-terminfo-terminal'.	22
8.18	Compilation mode	22
8.18.1	Messages from CMake are now recognized.	22
8.18.2	The number of errors, warnings, and informational messages is now	22
8.19	Grep	22
8.19.1	Grep commands will now use GNU grep's '-null' option if	22

8.19.2	The grep/rgrep/lgrep functions will now ask about saving files	22
8.20	Edebug	23
8.20.1	Edebug can be prevented from pausing 1 second after reaching a	23
8.20.2	New customizable option 'edebug-max-depth'.	23
8.20.3	'edebug-prin1-to-string' now aliases 'cl-prin1-to-string'.	23
8.21	Eshell	23
8.21.1	'eshell-input-filter's value is now a named function	23
8.22	EUDC	23
8.22.1	Backward compatibility support for BBDB versions less than 3	23
8.23	eww	24
8.23.1	New 'M-RET' command for opening a link at point in a new eww buffer.	24
8.23.2	A new 's' command for switching to another eww buffer via the minibuffer.	24
8.23.3	The 'o' command ('shr-save-contents') has moved to 'O' to avoid collision	24
8.23.4	A new command 'C' ('eww-toggle-colors') can be used to toggle	24
8.23.5	Images that are being loaded are now marked with gray	24
8.23.6	The 'w' command on links is now 'shr-maybe-probe-and-copy-url'.	24
8.24	Ido	24
8.24.1	The commands 'find-alternate-file-other-window',	24
8.25	Images	25
8.25.1	Images are automatically scaled before displaying based on the	25
8.25.2	It's now possible to specify aspect-ratio preserving combinations	25
8.25.3	Images inserted with 'insert-image' and related functions get a	25
8.25.4	A new library for creating and manipulating SVG images has been	25
8.25.5	New setf-able function to access and set image parameters is	25
8.25.6	New commands 'image-scroll-left' and 'image-scroll-right'	25
8.26	Image-Dired	26

8.26.1	Now provides a minor mode 'image-dired-minor-mode' which replaces	26
8.26.2	Thumbnail generation is now asynchronous.	26
8.26.3	'image-dired-thumbnail-storage' has a new option 'standard-large'	26
8.26.4	Inherits movement keys from 'image-mode' for viewing full images.	26
8.26.5	All the -options types have been changed to argument lists	26
8.26.6	Recognizes more tools by default, including pngnq-s9 and OptiPNG.	26
8.26.7	'find-file' and related commands now work on thumbnails and	26
8.27	The default 'Info-default-directory-list' no longer checks some obsolete	27
8.28	The commands that add ChangeLog entries now prefer a VCS root directory	27
8.29	Support for non-string values of 'time-stamp-format' has been removed.	27
8.30	Message	27
8.30.1	'message-use-idna' now defaults to t (because Emacs comes with	27
8.30.2	When sending HTML messages with embedded images, and you have	27
8.30.3	The 'message-valid-fqdn-regexp' variable has been removed, since	27
8.30.4	'message-beginning-of-line' (bound to 'C-a') understands folded headers.	27
8.31	Package	28
8.31.1	The new variable 'package-gnupghome-dir' has been added to control	28
8.31.2	Deleting a package no longer respects 'delete-by-moving-to-trash'.	28
8.32	Python	28
8.32.1	The new variable 'python-indent-def-block-scale' has been added.	28
8.33	Tramp	28
8.33.1	The method part of remote file names is mandatory now.	28

8.33.2	The new pseudo method "-" is a marker for the default method.	28
8.33.3	The command 'tramp-change-syntax' allows you to choose an	28
8.33.4	New connection method "sg", which supports editing files under a	28
8.33.5	New connection method "doas" for OpenBSD hosts.	29
8.33.6	New connection method "gdrive", which allows access to Google	29
8.33.7	Gateway methods in Tramp have been removed.	29
8.33.8	Setting the "ENV" environment variable in	29
8.33.9	Tramp is able now to send SIGINT to remote asynchronous processes.	29
8.33.10	Variable 'tramp-completion-mode' is obsoleted.	29
8.34	'auto-revert-use-notify' is set back to t in 'global-auto-revert-mode'.	29
8.35	JS mode	29
8.35.1	JS mode now sets 'comment-multi-line' to t.	29
8.35.2	New variable 'js-indent-align-list-continuation', when set to nil,	29
8.36	CSS mode	29
8.36.1	Support for completing attribute values, at-rules, bang-rules,	29
8.36.2	CSS mode now binds 'C-h S' to a function that will show	30
8.36.3	CSS colors are fontified using the color they represent as the	30
8.37	Emacs now supports character name escape sequences in character and	30
8.38	Prog mode has some support for multi-mode indentation.	30
8.39	ERC	30
8.39.1	New variable 'erc-default-port-tls' used to connect to TLS IRC	30
8.40	URL	30
8.40.1	The new function 'url-cookie-delete-cookie' can be used to	30
8.40.2	'url-retrieve-synchronously' now takes an optional timeout parameter.	31
8.40.3	The URL package now supports HTTPS over proxies supporting CONNECT.	31

8.40.4	'url-user-agent' now defaults to 'default', and the User-Agent	31
8.41	VC and related modes	31
8.41.1	'vc-dir-mode' now binds 'vc-log-outgoing' to 'O'; and has various	31
8.41.2	'vc-region-history' is now bound to 'C-x v h', replacing the older	31
8.41.3	New user option 'vc-git-print-log-follow' to follow re-names in Git logs	31
8.42	CC mode	31
8.42.1	Opening a .h file will turn C or C++ mode depending on language used.	31
8.43	New option 'cpp-message-min-time-interval' to allow user control	31
8.44	New DNS mode command 'dns-mode-ipv6-to-nibbles' to convert IPv6 addresses	32
8.45	Ispell	32
8.45.1	Enchant is now supported as a spell-checker.	32
8.46	Flymake	32
8.46.1	Flymake has been completely redesigned	32
8.47	Term	32
8.47.1	term-char-mode 模式下的 buffer 默认为只读模式	32
8.48	Xref	33
8.48.1	When an xref buffer is needed, 'TAB' quits and jumps to an xref.	33
9	Emacs 26.1 新的模式和包	33
9.1	新的 Elisp 数据结构库 radix-tree	33
9.2	New library 'xdg' with utilities for some XDG standards and specs.	33
9.3	HTML	33
9.3.1	A new submode of 'html-mode', 'mhtml-mode', is now the default	33
9.4	New mode 'conf-toml-mode' is a sub-mode of 'conf-mode', specialized	33
9.5	New mode 'conf-desktop-mode' is a sub-mode of 'conf-unix-mode',	33
9.6	New minor mode 'pixel-scroll-mode' provides smooth pixel-level scrolling.	33

9.7	New major mode 'less-css-mode' (a minor variant of 'css-mode') for	33
9.8	New package 'auth-source-pass' integrates 'auth-source' with the	34
10	Emacs 26.1 中不兼容的 Lisp 部分说明	34
10.1	'password-data' is now a hash-table so that 'password-read' can use	34
10.2	Command 'dired-mark-extension' now automatically prepends a '.' to the	34
10.3	Certain cond/pcase/cl-case forms are now compiled using a faster jump	34
10.4	If 'comment-auto-fill-only-comments' is non-nil, 'auto-fill-function'	34
10.5	The alist 'ucs-names' is now a hash table.	34
10.6	'if-let' and 'when-let' now support binding lists as defined by the	34
10.7	'C-up', 'C-down', 'C-left' and 'C-right' are now defined in term	35
10.8	Customizable variable 'query-replace-from-to-separator'	35
10.9	Some obsolete functions, variables, and faces have been removed:	35
10.9.1	'make-variable-frame-local'. Variables cannot be frame-local any more.	35
10.9.2	From subr.el: 'window-dot', 'set-window-dot', 'read-input',	35
10.9.3	'incomplete-prospects-length'.	35
10.9.4	All the default-FOO variables that hold the default value of the	35
10.9.5	Many variables obsoleted in 22.1 referring to face symbols.	36
10.10	The variable 'text-quoting-style' is now a customizable option. It	36
10.11	Functions like 'check-declare-file' and 'check-declare-directory'	36
10.12	The regular expression character class '[:blank:]' now matches	36
10.13	'min' and 'max' no longer round their results.	36
10.14	The variable 'old-style-backquotes' has been made internal and	36
10.15	'default-file-name-coding-system' now defaults to a coding system	36
10.16	'file-attributes', 'file-symlink-p' and 'make-symbolic-link' no	37
10.16.1	'file-attributes' and 'file-symlink-p' no longer prepend " /:" to	37

10.16.2	'make-symbolic-link' no longer looks for file name handlers of	37
10.16.3	'make-symbolic-link' removes the remote part of a link target if	37
10.16.4	'make-symbolic-link' now expands a link target with leading "~"	37
10.17	'file-truename' returns a quoted file name if the target of a . .	37
10.18	Module functions are now implemented slightly differently; in	38
10.19	The argument LOCKNAME of 'write-region' is propagated to file name	38
10.20	When built against recent versions of GTK+, Emacs always uses	38
10.21	Several functions that create or rename files now treat their .	38
10.22	The list returned by 'overlays-at' is now in decreasing priority order.	38
10.23	'format' now avoids allocating a new string in more cases. . .	39
10.24	The function 'eldoc-message' now accepts a single argument.	39
10.25	Using '&rest' or '&optional' incorrectly is now an error. . . .	39
10.26	The pinentry.el library has been removed.	39
11	Emacs 26.1 中 Lisp 的变化	40
11.1	函数 assoc 接受一个可选的第三位参数 TESTFN, 当这个参数不为 nil 时, 其用于比较而不是相等	40
11.2	New optional argument TESTFN in 'alist-get', 'map-elt' and 'map-put'.	40
11.3	New function 'seq-set-equal-p' to check if SEQUENCE1 and SEQUENCE2	40
11.4	The new function 'mapbacktrace' applies a function to all frames of	40
11.5	The new function 'file-name-case-insensitive-p' tests whether a	40
11.6	Several accessors for the value returned by 'file-attributes' . .	40
11.7	The new function 'buffer-hash' computes a fast, non-consing hash of	41
11.8	'interrupt-process' now consults the list 'interrupt-process-functions',	41
11.9	The new function 'read-multiple-choice' prompts for multiple-choice	41
11.10	'comment-indent-function' values may now return a cons to specify a	41
11.11	New optional argument TEXT in 'make-temp-file'.	41

11.12	New function 'define-symbol-prop'	41
11.13	New function 'secure-hash-algorithms' to list the algorithms that	41
11.14	Emacs now exposes the GnuTLS cryptographic API with the functions	41
11.15	The function 'gnutls-available-p' now returns a list of capa- bilities	42
11.16	Emacs now supports records for user-defined types, via the new	42
11.17	'save-some-buffers' now uses 'save-some-buffers-default-predicate'	42
11.18	string-(to as make)-(uni multi)byte 被声明为废弃	44
11.19	新变量 while-no-input-ignore-events 用于设置哪些特定的 while-no-input 事件可以被忽略, 它的值是一个 symbol 的 列表	44
11.20	新增函数 undo-amalgamate-change-group 去除两个状态 undo 之间的边界	44
11.21	新变量 definition-prefixes 是有相应文件定义的哈希表的映射 前缀, 可用于获取那些还没加载的定义 (如 C-h f)。	44
11.22	新变量 syntax-ppss-table 用于在 syntax-ppss 控制 syntax-table	44
11.23	define-derived-mode 可指定一个:after-hook 形式, 当新的 mode 的 hook 被执行后它将被求值, 可用于在 mode 启动时, mode- hook 引起配置发生变化的情况	44
11.24	自动加载产生的文件名不包含时间戳, 可通过设置变量 autoload-timestamps 的值不是 nil 产生时间戳	44
11.25	gnutls-boot 接受一个参数:complete-negotiation, 表示即使在 非阻塞的 socket 链接里协商应该完成	44
11.26	新增变量 flyspell-sort-corrections-function, 它是 flyspell.el 库 里的变量, 用于排序修正	44
11.27	新增命令 fortune-message 用于在 echo 区域显示名言警句 . .	44
11.28	新增函数 func-arity 返回任意函数的参数列表信息, 用于替 代之前的 subr-arity	44
11.29	新增函数 region-bounds 用于交互情境, 主要用于提供区域边 界 (超过一个的长方形区域), 只需要传递一个参数, 取代之 前的两个参数 (region-beginning 和 region-end)	44
11.30	parse-partial-sexp 函数的返回列表新增一种元素, 元素 10。 当最后一个被扫描的字符可能是两个结构字符的第一个字符 时, 如注释符, 这个元素的值就是最一个字符的语法值	44
11.31	parse-partial-sexp 函数返回列表的第 9 个元素作为固定返回 元素, 可用于 Lisp 编程。它的值是括号所含位置的列表, 从 最外层开始。	44
11.32	read-color 在将颜色作为背景色时将显示颜色名	44

11.33函数 <code>redirect-debugging-output</code> 可在非 GNU/Linux 平台上运行	44
11.34新增函数 <code>string-version-lessp</code> 比较两个字符串, 这里会把不连续的数字解析成数值, 然后进行比较例如"foo2.png"比"foo12.png"小	44
11.35数值比较和 <code>logb</code> 操作由于内部数据的取位操作, 不再返回精确值。例如 (<code>< most-positive-fixnum (+ 1.0 most-positive-fixnum)</code>) 在 64 位的机器上返回 <code>t</code>	44
11.36函数 <code>ffloor</code> , <code>fceiling</code> , <code>ftruncate</code> 和 <code>fround</code> 如文档所述只接受浮点类型参数。先前是可接受整型参数有些会返回无意义的结果如 (<code>< N (ffloor N)</code>) 返回 <code>t</code>	44
11.37在 GNU/Linux x86-64 机器上的长浮点型位数至少包含 <code>EMACS_INTWIDTH</code> - 3 个 bit。格式化返回不正确值是由于取舍问题, 例如 (<code>eq N (string-to-number (format "%.0f" N))</code>) 现在返回 <code>t</code>	44
11.38调用那些浮点类型的整型时会抛出异常 (如果传入的参数不是整型) 例如 (<code>decode-char 'ascii 0.5</code>) 现在会抛出错误异常	44
11.39函数 <code>string-trim-left</code> , <code>string-trim-right</code> 和 <code>string-trim</code> 接受可选参数指定子串的正则表达式	44
11.40新增函数 <code>char-from-name</code> , 作用于将 Unicode 编辑的字符串转换为对应的字符码 (character code)	44
11.41新增函数 <code>sxhash-eq</code> 和 <code>sxhash-eql</code> 返回一个 Lisp 对象的哈希值, 其分别用于 <code>eq</code> 和 <code>eql</code> 函数。如果两个对象是 <code>eq(eql)</code> , 则其函数 <code>sxhash-eq(sxhash-eql)</code> 计算的哈希值也一样。	44
11.42函数 <code>sxhash</code> 被重命名为 <code>sxhash-equal</code> , 为了兼容 <code>sxhash</code> 成为 <code>sxhash-equal</code> 别名	44
11.43 <code>make-hash-table</code> 默认的刷新阈值从 0.8 改成 0.8125, 避免舍入的小问题	44
11.44新增函数 <code>add-variable-watcher</code> 用于当一个变量的值发生变化时的函数调用。用于实现新的调试命令 <code>debug-on-variable-change</code>	44
11.45新变量 <code>print-escape-control-characters</code> 改变 <code>prin1</code> 和 <code>print</code> 输出控制字符为反斜杠	44
11.46时间转换函数支持时间区间规划参数, 其可为 <code>OFFSET</code> 或者列表 (<code>OFFSET ABBR</code>) 整型的 <code>OFFSET</code> 是相对于 <code>UT(Universal Time)</code> 时间的东向偏移 (单位秒)。字符串 <code>ABBR</code> 是时间区间的简写。受影响的函数有 <code>current-time-string</code> , <code>current-time-zone</code> , <code>decode-time</code> , <code>format-time-string</code> 和 <code>set-time-zone-rule</code>	44
11.47 <code>format-time-string</code> 函数支持 <code>%q</code> , 用于日历的季度	44
11.48新的内置函数 <code>mapcan</code> , 避免不必要的链接 (<code>consing</code>) 和 <code>gc</code> 操作	44

11.49	car 和 cdr, 以及 cXXXr 和 cXXXXr 的结构已经集成为 Elisp 一部分	44
11.50	gensym 已经集成进 Elisp 一部分	44
11.51	基础列表函数, 如 length 和 member, 做了相应优化成列表循环	44
11.52	新增加函数 make-nearby-temp-file 和 temporary-file-directory, 用于在远端或者所在目录创建临时文件	44
11.53	在 GNU 平台操作一个本地文件时, 同时另一个进程改变文件系统时, file-attributes 函数不再进行死循环; 如果不是 GNU 的平台遇到同样情况, file-attributes 尝试去检测死循环, 同时返回 nil	44
11.54	新函数 file-local-name 可用于指定远端进程的参数	44
11.55	新增加函数 file-name-quote、file-name-unquote 和 file-name-quoted-p	44
11.56	新增错误类型 file-missing 作为 file-error 子类型	45
11.57	delete-directory 函数的变化	45
11.58	新的错误类型 user-search-failed, 与 search-failed 类似, 但像 user-error 一样禁止高度机制	45
11.59	函数 line-number-at-pos 的变化	45
11.60	函数 color-distance 的调整	45
11.61	Frame 和 Window 操作	45
11.61.1	调整 frame 大小方式的改变	45
11.61.2	Frame 大小是否被调整	45
11.61.3	函数 frame-geometry 也会返回 frame 的外边界宽度	45
11.61.4	新增部分 frame 相关参数及老参数一些语义变化	45
11.61.5	新增函数 frame-list-z-order 返回按 z(栈) 顺序的 frame 列表	46
11.61.6	函数 'x-focus-frame' 不激活它的 frame 变成可选项	46
11.61.7	变量 focus-follows-mouse 增加第三个有意义的值 auto-raise	46
11.61.8	新增函数 frame-restack, 用于调整 frame 的层级关系	47
11.61.9	新增 internal-border 用于指定 frame 的外部边界背景	47
11.61.10	select-window 函数 NORECORD 参数增加 mark-for-redisplay 选项	47
11.61.11	正式支持对边窗 (side windows)	47
11.61.12	支持原子窗口	47
11.61.13	新增 display-buffer 列表项 window-parameters	47
11.61.14	新增函数 display-buffer-reuse-mode-window	47
11.61.15	新窗口参数 no-delete-other-windows	47
11.61.16	新窗口参数 mode-line-format 和 'header-line-format	47

11.61.1	新增命令 window-swap-states	47
11.61.18	新增 window-pixel-width-before-size-change 和 window-pixel-height-before-size-change 函数	48
11.61.19	新增函数 window-lines-pixel-dimensions 用于返回一个窗口文本行的像素大小	48
11.61.2	新增函数 window-largest-empty-rectangle 用于返回在窗口里没有文本区域最大矩形大小	48
11.61.2	函数'mouse-autoselect-window' 语义微调	48
11.61.22	select-frame-by-name' 在当前的显示器里无法找到一个匹配的 frame, 可返回一个在其他显示器上的 frame	48
11.62	'tcl-auto-fill-mode' 已经声明废弃	48
11.63	新增 pcase 模式'rx' 用于匹配 rx 风格的正则表达式	48
11.64	新增区域二次选择函数	48
11.65	新增函数'lgstring-remove-glyph'	48
12	Emacs 26.1 在一些特殊模式和包中的变化	48
12.1	在 Windows7& 以上系统对快捷键的捕获性能更好	48
12.2	'convert-standard-filename' 函数的变化	49
12.3	MS-Windows 平台下的 GUI 会话像 Posix 平台一样将被当作 SIGINT	49
12.4	Windows XP 及以后系统'signal-process' 支持 SIGTRAP	49
12.5	macOS 系统里的一些小优化	49
13	GNU Emacs 协议声明原文	50

1 本文档说明

这是 Emacs 26 版本发布说明的中文翻译版本：

GNU Emacs NEWS – history of user-visible changes.

Copyright (C) 2016-2018 Free Software Foundation, Inc. See the end of the file for license conditions.

Please send Emacs bug reports to bug-gnu-emacs@gnu.org. If possible, use M-x report-emacs-bug.

This file is about changes in Emacs version 26.

See file HISTORY for a list of GNU Emacs versions and release dates. See files NEWS.25, NEWS.24, ..., NEWS.18, and NEWS.1-17 for changes in older Emacs versions.

You can narrow news to a specific version by calling 'view-emacs-news' with a prefix argument or by typing C-u C-h C-n.

2 Emacs 26.2 安装变化

2.1 使用'-with-xwidgets' 参数构建 Emacs 需要依赖 WebKit2

构建支持 xwidgets 版本的 Emacs，需要先安装 webkit2gtk-4.0 包，要求版本在 2.12 及以上版本。这个改变其实从 Emacs 26.1 开始的，只不过没有发布文档里提到。

3 Emacs 26.2 中特殊模式和包的变化

3.1 Gnus

Mailutils movemail will now be used if found at runtime. **mail-source-movemail-program** 这个变量的默认值已经改为 **movemail**。这样做的目的是确保使用 GNU 的邮件工作包里的移动邮件程序，如果发现它在 exec-path 目录里（即使在构建时没有找到）。可以通过定制 **mail-source-movemail-program** 变量的值来切换到其他程序。

3.2 Shell 模式

Shell 模式下的 Buffer 的 **scroll-conservatively** 变量默认值变为 101。这样使得在 Shell 模式下，当有新的输出添加到屏幕时，更好地模拟在文本终端下的滚动行为。重新将 **scroll-conservatively** 变量的值设置为 0 或者任何其他值，就可回退出老版本的行为（可以在 shell-mode-hook 的函数列表里设置）。这个改变也是从 Emacs 26.1 就有，不过没有在其文档中提到。

3.3 VC

优化了 VC 对 Mercurial 的支持。Emacs 为了更快的操作速度，尽量避免唤起 hg。

3.3.1 新 vc-hg 选项

新增'vc-hg-parse-hg-data-structures' 用来控制 vc-hg 是否解析直接 Mercurial 数据结构，或者采用执行 hg 来替代。默认值为 t (老版本值为 nil)。

新增'vc-hg-symbolic-revision-styles' 用来控制在 mode line 模式下版本的展示样式。

新增'vc-hg-use-file-version-for-mode-line-version' 用来控制将版本展示在 mode line 里是那些已经访问过的文件还是那整体工作仓库的拷贝。

3.3.2 Mercurial 版本在 mode-line 的显示变化

老版本, mode-line 显示的是本地修改的版本数值 (1, 2, 3, ...)。从 26.1 版本开始, 默认显示做了变化, 当前显示的是全局的修改版本值, 格式为修改的 hash 值。如果想恢复到之前的显示, 只需要修改变量 `vc-hg-symbolic-revision-styles` 的值为 (`"{rev}"`)。

4 Emacs 26.1 安装变化

4.1 默认情况下编译 Emacs 需要 libgnutls 这个库

采用 `configure --with-gnutls=no` 这个选项已经废弃。

4.2 GnuTLS 版本需要 2.12.2 或者更高版本

4.3 The new option 'configure --with-mailutils' causes Emacs to rely on

GNU Mailutils to retrieve email. It is recommended, and is the default if GNU Mailutils is installed. When `--with-mailutils` is not in effect, the Emacs build procedure by default continues to build and install a limited 'movemail' substitute that retrieves POP3 email only via insecure channels. To avoid this problem, use either `--with-mailutils` or `--without-pop` when configuring; `--without-pop` is the default on platforms other than native MS-Windows.

4.4 The new option 'configure --enable-gcc-warnings=warn-only' causes

GCC to issue warnings without stopping the build. This behavior is now the default in developer builds. As before, use `'--disable-gcc-warnings'` to suppress GCC's warnings, and `'--enable-gcc-warnings'` to stop the build if GCC issues warnings.

4.5 When GCC warnings are enabled, '--enable-check-lisp-object-type' is

now enabled by default when configuring.

4.6 The Emacs server now has socket-launching support. This allows

socket based activation, where an external process like systemd can invoke the Emacs server process upon a socket connection event and hand the socket over to Emacs. Emacs uses this socket to service emacsclient commands. This new functionality can be disabled with the configure option `'--disable-libsystemd'`.

4.7 A systemd user unit file is provided. Use it in the standard way:

`'systemctl --user enable emacs'`. (If your Emacs is installed in a non-standard location, you may need to copy the emacs.service file to eg `~/.config/systemd/user/`)

4.8 New configure option `'--disable-build-details'` attempts to build an

Emacs that is more likely to be reproducible; that is, if you build and install Emacs twice, the second Emacs is a copy of the first. Deterministic builds omit the build date from the output of the `'emacs-version'` and `'erc-cmd-SV'` functions, and the leave the following variables nil: `'emacs-build-system'`, `'emacs-build-time'`, `'erc-emacs-build-time'`.

4.9 Emacs can now be built with support for Little CMS.

If the `lcms2` library is installed, Emacs will enable features built on top of that library. The new configure option `'--without-lcms2'` can be used to build without `lcms2` support even if it is installed. Emacs linked to Little CMS exposes color management functions in Lisp: the color metrics `'lcms-cie-de2000'` and `'lcms-cam02-ucs'`, as well as functions for conversion to and from CIE CAM02 and CAM02-UCS.

4.10 The configure option `'--with-gameuser'` now defaults to `'no'`,

as this appears to be the most common configuration in practice. When it is `'no'`, the shared game directory and the auxiliary program `update-game-score` are no longer needed and are not installed.

4.11 Emacs 不再对 IRIX 系统做支持

我们希望这部分 Emacs 用户不会因此受到影响，因为 SGI 从 2013 年 12 月份开始已经停止了对 IRIX 的支持。

5 Emacs 26.1 启动的变化

5.1 新增'-fg-daemon' 选项

这个选项跟'-daemon' 类似，只有一点不一样的那就是它是运行在前台并且不是 fork 的。这个选项的目的是用于现在启动系统，如 systemd，它管理许多传统的常住行为 (daemon behavior)。同时，这个'-bg-daemon' 选项是'-daemon' 的别名。

5.2 新增'-module-assertions' 选项

When given this option, Emacs will perform expensive correctness checks when dealing with dynamic modules. This is intended for module authors that wish to verify that their module conforms to the module requirements. The option makes Emacs abort if a module-related assertion triggers.

5.3 Emacs now supports 24-bit colors on capable text terminals.

Terminal is automatically initialized to use 24-bit colors if the required capabilities are found in terminfo. See the FAQ node "(efaq) Colors on a TTY" for more information.

5.4 Emacs 在启动的时候遵守 X 资源"scrollBar"

这个效果与工具条 (tool bar) 里的"toolBar" 资源类似。

6 Emacs 26.1 的变化

6.1 'buffer-offer-save' 添加新值

'buffer-offer-save' 添加新的选项'always'。当配置为这个值时命令'save-some-buffers' 将这个 buffer 作为保存项 (offer this buffer for saving)。

6.2 Security vulnerability related to Enriched Text mode is removed.

6.2.1 Enriched Text mode does not evaluate Lisp in 'display' properties.

This feature allows saving 'display' properties as part of text. Emacs 'display' properties support evaluation of arbitrary Lisp forms as part of processing the property for display, so displaying Enriched Text could be vulnerable to executing arbitrary malicious Lisp code included in the text (e.g., sent as part of an email message). Therefore, execution of arbitrary Lisp forms in 'display' properties decoded by Enriched Text mode is now disabled by default. Customize the new option 'enriched-allow-eval-in-display-props' to a non-nil value to allow Lisp evaluation in decoded 'display' properties.

This vulnerability was introduced in Emacs 21.1. To work around that in Emacs versions before 25.3, append the following to your ~/.emacs init file:

```
(eval-after-load "enriched" '(defun enriched-decode-display-prop (start
end &optional param) (list start end)))
```

6.3 Functions in 'write-content-functions' can fully short-circuit the

'save-buffer' process. Previously, saving a buffer that was not visiting a file would always prompt for a file name. Now it only does so if 'write-content-functions' is nil (or all its functions return nil).

6.4 New variable 'executable-prefix-env' for inserting magic signatures.

This variable affects the format of the interpreter magic number inserted by 'executable-set-magic'. If non-nil, the magic number now takes the form "#!/usr/bin/env interpreter", otherwise the value determined by 'executable-prefix', which is by default "#!/path/to/interpreter". By default, 'executable-prefix-env' is nil, so the default behavior is not changed.

6.5 The variable 'emacs-version' no longer includes the build number.

This is now stored separately in a new variable, 'emacs-build-number'.

6.6 Emacs now provides a limited form of concurrency with Lisp threads.

Concurrency in Emacs Lisp is "mostly cooperative", meaning that Emacs will only switch execution between threads at well-defined times: when Emacs waits for input, during blocking operations related to threads (such as mutex locking), or when the current thread explicitly yields. Global variables are shared among all threads, but a 'let' binding is thread-local. Each thread also has its own current buffer and its own match data.

See the chapter "(elisp) Threads" in the ELisp manual for full documentation of these facilities.

6.7 The new user variable 'electric-quote-chars' provides a list

of curved quotes for 'electric-quote-mode', allowing user to choose the types of quotes to be used.

6.8 The new user option 'electric-quote-context-sensitive' makes

'electric-quote-mode' context sensitive. If it is non-nil, you can type an ASCII apostrophe to insert an opening or closing quote, depending on context. Emacs will replace the apostrophe by an opening quote character at the beginning of the buffer, the beginning of a line, after a whitespace character, and after an opening parenthesis; and it will replace the apostrophe by a closing quote character in all other cases.

6.9 The new variable 'electric-quote-inhibit-functions' controls when

to disable electric quoting based on context. Major modes can add functions to this list; Emacs will temporarily disable 'electric-quote-mode' whenever any of the functions returns non-nil. This can be used by major modes that derive from 'text-mode' but allow inline code segments, such as 'markdown-mode'.

6.10 The new user variable 'dired-omit-case-fold' allows the user to

customize the case-sensitivity of dired-omit-mode. It defaults to the same sensitivity as that of the filesystem for the corresponding dired buffer.

6.11 Emacs now uses double buffering to reduce flicker when editing and

resizing graphical Emacs frames on the X Window System. This support requires the DOUBLE-BUFFER extension, which major X servers have supported for many years. If your system has this extension, but an Emacs built with double buffering misbehaves on some displays you use, you can disable the feature by adding

```
(inhibit-double-buffering . t)
```

to default-frame-alist. Or inject this parameter into the selected frame by evaluating this form:

```
(modify-frame-parameters nil '((inhibit-double-buffering . t)))
```

6.12 The customization group 'wp', whose label was "text", is now

deprecated. Use the new group 'text', which inherits from 'wp', instead.

6.13 The new function 'call-shell-region' executes a command in an

inferior shell with the buffer region as input.

6.14 The new user option 'shell-command-dont-erase-buffer' controls

if the output buffer is erased between shell commands; if non-nil, the output buffer is not erased; this variable also controls where to set the point in the output buffer: beginning of the output, end of the buffer or save the point. When 'shell-command-dont-erase-buffer' is nil, the default value, the behavior of 'shell-command', 'shell-command-on-region' and 'async-shell-command' is as usual.

6.15 The new user option 'async-shell-command-display-buffer' controls

whether the output buffer of an asynchronous command is shown immediately, or only when there is output.

6.16 New user option 'mouse-select-region-move-to-beginning'.

This option controls the position of point when double-clicking mouse-1 on the end of a parenthetical grouping or string-delimiter: the default value nil keeps point at the end of the region, setting it to non-nil moves point to the beginning of the region.

6.17 New user option 'mouse-drag-and-drop-region'.

This option allows you to drag the entire region of text to another place or another buffer. Its behavior is customizable via the new options 'mouse-drag-and-drop-region-cut-when-buffers-differ', 'mouse-drag-and-drop-region-show-tooltip', and 'mouse-drag-and-drop-region-show-cursor'.

6.18 The new user option 'confirm-kill-processes' allows the user to

skip a confirmation prompt for killing subprocesses when exiting Emacs. When set to t (the default), Emacs will prompt for confirmation before killing subprocesses on exit, which is the same behavior as before.

6.19 'find-library-name' will now fall back on looking at 'load-history'

to try to locate libraries that have been loaded with an explicit path outside 'load-path'.

6.20 Faces in 'minibuffer-prompt-properties' no longer overwrite properties

in the text in functions like 'read-from-minibuffer', but instead are added to the end of the face list. This allows users to say things like '(read-from-minibuffer (propertize "Enter something: " 'face 'bold))'.

6.21 The new variable 'extended-command-suggest-shorter' has been added

to control whether to suggest shorter 'M-x' commands or not.

6.22 `icomplete` now respects `'completion-ignored-extensions'`.

6.23 Non-breaking hyphens are now displayed with the `'nobreak-hyphen'`

face instead of the `'escape-glyph'` face.

6.24 Approximations to quotes are now displayed with the new `'homoglyph'`

face instead of the `'escape-glyph'` face.

6.25 New face `'header-line-highlight'`.

This face is the header-line analogue of `'mode-line-highlight'`; it should be the preferred mouse-face for mouse-sensitive elements in the header line.

6.26 `'C-x h'` (`'mark-whole-buffer'`) will now avoid marking the prompt

part of minibuffers.

6.27 `'fill-paragraph'` no longer marks the buffer as changed unless it

actually changed something.

6.28 The locale language name `'ca'` is now mapped to the language

environment `'Catalan'`, which has been added.

6.29 `'align-regexp'` has a separate history for its interactive argument.

`'align-regexp'` no longer shares its history with all other history-less functions that use `'read-string'`.

6.30 The networking code has been reworked so that it's more

asynchronous than it was (when specifying `:nowait t` in `'make-network-process'`). How asynchronous it is varies based on the capabilities of the

system, but on a typical GNU/Linux system the DNS resolution, the connection, and (for TLS streams) the TLS negotiation are all done without blocking the main Emacs thread. To get asynchronous TLS, the TLS boot parameters have to be passed in (see the manual for details).

Certain process oriented functions (like 'process-datagram-address') will block until socket setup has been performed. The recommended way to deal with asynchronous sockets is to avoid interacting with them until they have changed status to "run". This is most easily done from a process sentinel.

6.31 'make-network-process' and 'open-network-stream' sometimes allowed

:service to be an integer string (e.g., :service "993") and sometimes required an integer (e.g., :service 993). This difference has been eliminated, and integer strings work everywhere.

6.32 It is possible to disable attempted recovery on fatal signals.

Two new variables support disabling attempts to recover from stack overflow and to avoid automatic auto-save when Emacs is delivered a fatal signal. 'attempt-stack-overflow-recovery', if set to nil, will disable attempts to recover from C stack overflows; Emacs will then crash as with any other fatal signal. 'attempt-orderly-shutdown-on-fatal-signal', if set to nil, will disable attempts to auto-save the session and shut down in an orderly fashion when Emacs receives a fatal signal; instead, Emacs will terminate immediately. Both variables are non-nil by default. These variables are for users who would like to avoid the small probability of data corruption due to techniques Emacs uses to recover in these situations.

6.33 File local and directory local variables are now initialized each

time the major mode is set, not just when the file is first visited. These local variables will thus not vanish on setting a major mode.

6.34 A second dir-local file (.dir-locals-2.el) is now accepted.

See the doc string of 'dir-locals-file' for more information.

6.35 Connection-local variables can be used to specify local variables

with a value depending on the connected remote server. For details, see the node "(elisp) Connection Local Variables" in the ELisp manual.

6.36 International domain names (IDNA) are now encoded via the new

puny.el library, so that one can visit Web sites with non-ASCII URLs.

6.37 The new 'list-timers' command lists all active timers in a buffer,

where you can cancel them with the 'c' command.

6.38 'switch-to-buffer-preserve-window-point' now defaults to t.

Applications that call 'switch-to-buffer' and want to show the buffer at the position of its point should use 'pop-to-buffer-same-window' in lieu of 'switch-to-buffer'.

6.39 The new variable 'debugger-stack-frame-as-list' allows displaying

all call stack frames in a Lisp backtrace buffer as lists. Both debug.el and edebug.el have been updated to heed to this variable.

6.40 Values in call stack frames are now displayed using 'cl-prin1'.

The old behavior of using 'prin1' can be restored by customizing the new option 'debugger-print-function'.

6.41 NUL bytes in text copied to the system clipboard are now replaced with "\0".

6.42 The new variable 'x-ctrl-keysym' has been added to the existing

roster of X keysyms. It can be used in combination with another variable of this kind to swap modifiers in Emacs.

6.43 New input methods: 'cyrillic-tuvan', 'polish-prefix', 'uzbek-cyrillic'.

6.44 The 'dutch' input method no longer attempts to support Turkish too.

Also, it no longer converts 'IJ' and 'ij' to the compatibility characters U+0132 LATIN CAPITAL LIGATURE IJ and U+0133 LATIN SMALL LIGATURE IJ.

6.45 File name quoting by adding the prefix `"/:"` is now possible for the

local part of a remote file name. Thus, if you have a directory named `"~"` on the remote host `"foo"`, you can prevent it from being substituted by a home directory by writing it as `"/foo::~~/file"`.

6.46 The new variable 'maximum-scroll-margin' allows having effective

settings of 'scroll-margin' up to half the window size, instead of always restricting the margin to a quarter of the window.

6.47 Emacs can scroll horizontally using mouse, touchpad, and trackbar.

You can enable this by customizing 'mouse-wheel-tilt-scroll'. If you want to reverse the direction of the scroll, customize 'mouse-wheel-flip-direction'.

6.48 The default GnuTLS priority string now includes `%DUMBFW`.

This is to avoid bad behavior in some firewalls, which causes the connection to be closed by the remote host.

6.49 Emacsclient changes

6.49.1 Emacsclient has a new option `'-u'` / `'--suppress-output'`.

This option suppresses display of return values from the server process.

6.49.2 Emacsclient has a new option '-T' / '-tramp'.

This helps with using a local Emacs session as the server for a remote emacsclient. With appropriate setup, one can now set the EDITOR environment variable on a remote machine to emacsclient, and use the local Emacs to edit remote files via Tramp. See the node "(emacs) emacsclient Options" in the user manual for the details.

6.49.3 Emacsclient now accepts command-line options in ALTERNATE_{EDITOR}

and '-alternate-editor'. For example, ALTERNATE_{EDITOR}="emacs -Q -nw". Arguments may be quoted "like this", so that for example an absolute path containing a space may be specified; quote escaping is not supported.

6.50 New user option 'dig-program-options' and extended functionality

for DNS-querying functions 'nslookup-host', 'dns-lookup-host', and 'run-dig'. Each function now accepts an optional name server argument interactively (with a prefix argument) and non-interactively.

6.51 'describe-key-briefly' now ignores mouse movement events.

6.52 The new variable 'eval-expression-print-maximum-character' prevents

large integers from being displayed as characters by 'M-:' and similar commands.

6.53 Two new commands for finding the source code of Emacs Lisp

libraries: 'find-library-other-window' and 'find-library-other-frame'.

6.54 The new variable 'display-raw-bytes-as-hex' allows you to change

the display of raw bytes from octal to hex.

6.55 You can now provide explicit field numbers in format specifiers.

For example, `'(format "%2$s %1$s %2$s" "X" "Y")'` produces `"Y X Y"`.

6.56 Emacs 支持在 Buffer 里显示行号 (可选项)

这个显示行号的原生支持与之前的 `linum-mode` 提供的功能一样，但它更快。并且，不会因为行号的显示而占用边距。通过配置 Buffer 本地变量 `display-line-numbers` 去开启这个行号显示项。或者还可以通过打开 `display-line-numbers-mode` 这个 minor 模式也能达到相同效果。还有一种方式，那就是打开全局的 `global-display-line-numbers-mode` 模式。当这些模式打开后，配置 `display-line-numbers-type` 的值会与 `display-line-numbers` 的值相同。行号不会显示在所有的 minibuffer 的窗口以及提示窗口，因为他们不是用于此处。

Lisp 程序可以通过设置 `display-line-numbers-disable` 的文本属性或者屏幕当前行第一个字符的属性来关闭此功能。做成可配置的包目的是为了更好地做显示控制。Lisp 程序想知道多少屏幕宽度被行号所占用，可以通过 `line-number-display-width` 这个函数来获取。`linum-mode` 和其他类似的包可以废弃，不再使用。Emacs 官方推荐使用新的原生方法来显示行号。

6.57 添加 'arabic-shaper-ZWNJ-handling' 用户选项用来处理 Arabic 文本渲染中的 ZWNJ 问题

7 Emacs 26.1 中编辑操作的变化

7.1 新加变量 'column-number-indicator-zero-based'.

Traditionally, in Column Number mode, the displayed column number counts from zero starting at the left margin of the window. This behavior is now controlled by 'column-number-indicator-zero-based'. If you would prefer for the displayed column number to count from one, you may set this variable to nil. (Behind the scenes, there is now a new mode line construct, '%C', which operates exactly as '%c' does except that it counts from one.)

7.2 New single-line horizontal scrolling mode.

The 'auto-hscroll-mode' variable can now have a new special value, 'current-line', which causes only the line where the cursor is displayed to be horizontally scrolled when lines are truncated on display and point moves outside the left or right window margin.

7.3 New mode line constructs '%o' and '%q', and user option

'mode-line-percent-position'. '%o' displays the "degree of travel" of the window through the buffer. Unlike the default '%p', this percentage approaches 100% as the window approaches the end of the buffer. '%q' displays the percentage offsets of both the start and the end of the window, e.g. "5-17%". The new option 'mode-line-percent-position' makes it easier to switch between '%p', '%P', and these new constructs.

7.4 Two new user options 'list-matching-lines-jump-to-current-line' and

'list-matching-lines-current-line-face' to show the current line highlighted in **Occur** buffer.

7.5 The 'occur' command can now operate on the region.

7.6 New bindings for 'query-replace-map'.

'undo', undo the last replacement; bound to 'u'. 'undo-all', undo all replacements; bound to 'U'.

7.7 'delete-trailing-whitespace' deletes whitespace after form feed.

In modes where form feed was treated as a whitespace character, 'delete-trailing-whitespace' would keep lines containing it unchanged. It now deletes whitespace after the last form feed thus behaving the same as in modes where the character is not whitespace.

7.8 Emacs no longer prompts about editing a changed file when the file's

content is unchanged. Instead of only checking the modification time, Emacs now also checks the file's actual content before prompting the user.

7.9 Various casing improvements.

7.9.1 'upcase', 'upcase-region' et al. convert title case characters

(such as) into their upper case form (such as).

7.9.2 'capitalize', 'upcase-initials' et al. make use of title-case forms

of initial characters (correctly producing for example `ungla` instead of incorrect `ungla`).

7.9.3 Characters which turn into multiple ones when cased are correctly handled.

For example, `fi` ligature is converted to `FI` when upper cased.

7.9.4 Greek small sigma is correctly handled when at the end of the word.

Strings such as `ΟΣΟΣ` are now correctly converted to `Ο` when capitalized instead of incorrect `Ο` (compare lowercase sigma at the end of the word).

7.10 Emacs can now auto-save buffers to visited files in a more robust

manner via the new mode `'auto-save-visited-mode'`. Unlike `'auto-save-visited-file-name'`, this mode uses the normal saving procedure and therefore obeys saving hooks. `'auto-save-visited-file-name'` is now obsolete.

7.11 New behavior of 'mark-defun'.

Prefix argument selects that many (or that many more) defuns. Negative prefix arg flips the direction of selection. Also, `'mark-defun'` between defuns correctly selects `N` following defuns (or `-N` previous for negative arguments). Finally, comments preceding the defun are selected unless they are separated from the defun by a blank line.

7.12 New command 'replace-buffer-contents'.

This command replaces the contents of the accessible portion of the current buffer with the contents of the accessible portion of a different buffer while keeping point, mark, markers, and text properties as intact as possible.

7.13 New commands 'apropos-local-variable' and 'apropos-local-value'.

These are buffer-local versions of 'apropos-variable' and 'apropos-value', respectively. They show buffer-local variables whose names and values, respectively, match a given pattern.

7.14 More user control of reordering bidirectional text for display.

The two new variables, 'bidi-paragraph-start-re' and 'bidi-paragraph-separate-re', allow customization of what exactly are paragraphs, for the purposes of bidirectional display.

7.15 New variable 'x-wait-for-event-timeout'.

This controls how long Emacs will wait for updates to the graphical state to take effect (making a frame visible, for example).

8 Emacs 26.1 中特殊模式和包的变化

8.1 Emacs 26.1 采用 Org 9.1.6 版本.

具体变化可查看 ORG-NEWS 文件

8.2 新函数 cl-generic-p

8.3 Dired 的变化

8.3.1 You can answer 'all' in 'dired-do-delete' to delete recursively all

remaining directories without more prompts.

8.3.2 Dired supports wildcards in the directory part of the file names.

8.3.3 You can now use '¿' in 'dired-do-shell-command'.

It gets replaced by the current file name, like ' ? '.

8.3.4 A new option 'dired-always-read-filesystem' defaulting to nil.

If non-nil, buffers visiting files are reverted before they are searched; for instance, in 'dired-mark-files-containing-regexp' a non-nil value of this option means the file is revisited in a temporary buffer; this temporary buffer is the actual buffer searched: the original buffer visiting the file is not modified.

8.3.5 Users can now customize mouse clicks in Dired in a more flexible way.

The new command 'dired-mouse-find-file' can be bound to a mouse click and used to visit files/directories in Dired in the selected window. The new command 'dired-mouse-find-file-other-frame' similarly visits files/directories in another frame. You can write your own commands that invoke 'dired-mouse-find-file' with non-default optional arguments, to tailor the effects of mouse clicks on file names in Dired buffers.

8.3.6 In wdired, when editing files to contain slash characters,

the resulting directories are automatically created. Whether to do this is controlled by the 'wdired-create-parent-directories' variable.

8.3.7 'W' is now bound to 'browse-url-of-dired-file', and is useful for

viewing HTML files and the like.

8.3.8 New variable 'dired-clean-confirm-killing-deleted-buffers'

controls whether Dired asks to kill buffers visiting deleted files and directories. The default is t, so Dired asks for confirmation, to keep previous behavior.

8.4 html2text is now marked obsolete.

8.5 smerge-refine-regions can refine regions in separate buffers.

8.6 Info menu and index completion uses substring completion by default.

This can be customized via the 'info-menu' category in 'completion-category-overrides'.

8.7 The ancestor buffer is shown by default in 3-way merges.

A new option 'ediff-show-ancestor' and a new toggle 'ediff-toggle-show-ancestor'.

8.8 T_EX: Add luatex and xetex as alternatives to pdftex

8.9 Electric-Buffer-menu

8.9.1 Key 'U' is bound to 'Buffer-menu-unmark-all' and key 'M-DEL' is

bound to 'Buffer-menu-unmark-all-buffers'.

8.10 hideshow mode got four key bindings that are analogous to outline

mode bindings: 'C-c @ C-a', 'C-c @ C-t', 'C-c @ C-d', and 'C-c @ C-e'.

8.11 bs

8.11.1 Two new commands 'bs-unmark-all', bound to 'U', and 'bs-unmark-previous', bound to <backspace>.

8.12 Buffer-menu

8.12.1 Two new commands 'Buffer-menu-unmark-all', bound to 'U' and

'Buffer-menu-unmark-all-buffers', bound to 'M-DEL'.

8.13 Checkdoc

8.13.1 'checkdoc-arguments-in-order-flag' now defaults to nil.

8.14 Gnus

8.14.1 The ~/.newsrsrc file will now only be saved if the native select

method is an NNTP select method.

8.14.2 A new command for sorting articles by readedness marks has been

added: 'C-c C-s C-m C-m'.

8.14.3 In 'message-citation-line-format' the '%Z' format is now the time

zone name instead of the numeric form. The '%z' format continues to be the numeric form. The new behavior is compatible with 'format-time-string'.

8.15 Ibuffer

8.15.1 New command 'ibuffer-jump'.

8.15.2 New filter commands 'ibuffer-filter-by-basename',

'ibuffer-filter-by-file-extension', 'ibuffer-filter-by-directory', 'ibuffer-filter-by-starred-name', 'ibuffer-filter-by-modified' and 'ibuffer-filter-by-visiting-file'; bound respectively to 'b', '.', '//', '/*', '/i' and '/v'.

8.15.3 Two new commands 'ibuffer-filter-chosen-by-completion'

and 'ibuffer-and-filter', the second bound to '/&'.

8.15.4 The commands 'ibuffer-pop-filter', 'ibuffer-pop-filter-group',

'ibuffer-or-filter' and 'ibuffer-filter-disable' have the alternative bindings '/<up>', '/S-<up>', '/|' and '/DEL', respectively.

8.15.5 The data format specifying filters has been extended to allow

explicit logical 'and', and a more flexible form for logical 'not'. See 'ibuffer-filtering-qualifiers' doc string for full details.

8.15.6 A new command 'ibuffer-copy-buffername-as-kill'; bound

to 'B'.

8.15.7 New command 'ibuffer-change-marks'; bound to '* c'.

8.15.8 A new command 'ibuffer-mark-by-locked' to mark

all locked buffers; bound to '% L'.

8.15.9 A new option 'ibuffer-locked-char' to indicate

locked buffers; Ibuffer shows a new column displaying 'ibuffer-locked-char' for locked buffers.

8.15.10 A new command 'ibuffer-unmark-all-marks' to unmark

all buffers without asking confirmation; bound to 'U'; 'ibuffer-do-replace-regexp' bound to 'r'.

8.15.11 A new command 'ibuffer-mark-by-content-regexp' to mark buffers

whose content matches a regexp; bound to '% g'.

8.15.12 Two new options 'ibuffer-never-search-content-name' and

'ibuffer-never-search-content-mode' used by 'ibuffer-mark-by-content-regexp'.

8.16 Browse-URL

8.16.1 Support for opening links to man pages in Man or WoMan mode.

8.17 Comint

8.17.1 New user option 'comint-move-point-for-matching-input' to control

where to place point after 'C-c M-r' and 'C-c M-s'.

8.17.2 New user option 'comint-terminfo-terminal'.

This option allows control of the value of the TERM environment variable Emacs puts into the environment of the Comint mode and its derivatives, such as Shell mode and Compilation Shell minor-mode. The default is "dumb", for compatibility with previous behavior.

8.18 Compilation mode

8.18.1 Messages from CMake are now recognized.

8.18.2 The number of errors, warnings, and informational messages is now

displayed in the mode line. These are updated as compilation proceeds.

8.19 Grep

8.19.1 Grep commands will now use GNU grep's '-null' option if available, which allows distinguishing the filename from contents if they contain colons. This can be controlled by the new custom option 'grep-use-null-filename-separator'.

8.19.2 The grep/rgrep/lgrep functions will now ask about saving files

before running. This is controlled by the 'grep-save-buffers' variable.

8.20 Edebug

8.20.1 Edebug can be prevented from pausing 1 second after reaching a

breakpoint (e.g. with "f" and "o") by customizing the new option 'edebug-sit-on-break'.

8.20.2 New customizable option 'edebug-max-depth'.

This allows you to enlarge the maximum recursion depth when instrumenting code.

8.20.3 'edebug-prin1-to-string' now aliases 'cl-prin1-to-string'.

This means edebug output is affected by variables 'cl-print-readably' and 'cl-print-compiled'. To completely restore the previous printing behavior, use

```
(fset 'edebug-prin1-to-string #'prin1-to-string)
```

8.21 Eshell

8.21.1 'eshell-input-filter's value is now a named function

'eshell-input-filter-default', and has a new custom option 'eshell-input-filter-initial-space' to ignore adding commands prefixed with blank space to eshell history.

8.22 EUDC

8.22.1 Backward compatibility support for BBDB versions less than 3

(i.e., BBDB 2.x) is deprecated and will likely be removed in the next major release of Emacs. Users of BBDB 2.x should plan to upgrade to BBDB 3.x.

8.23 eww

8.23.1 New 'M-RET' command for opening a link at point in a new eww buffer.

8.23.2 A new 's' command for switching to another eww buffer via the minibuffer.

8.23.3 The 'o' command ('shr-save-contents') has moved to 'O' to avoid collision

with the 'o' command from 'image-map'.

8.23.4 A new command 'C' ('eww-toggle-colors') can be used to toggle

whether to use the HTML-specified colors or not. The user can also customize the 'shr-use-colors' variable.

8.23.5 Images that are being loaded are now marked with gray

"placeholder" images of the size specified by the HTML. They are then replaced by the real images asynchronously, which will also now respect width/height HTML specs (unless they specify widths/heights bigger than the current window).

8.23.6 The 'w' command on links is now 'shr-maybe-probe-and-copy-url'.

'shr-copy-url' now only copies the url at point; users who wish to avoid accidentally accessing remote links may rebind 'w' and 'u' in 'eww-link-keymap' to it.

8.24 Ido

8.24.1 The commands 'find-alternate-file-other-window',

'dired-other-window', 'dired-other-frame', and 'display-buffer-other-window' are now remapped to Ido equivalents if Ido mode is active.

8.25 Images

8.25.1 Images are automatically scaled before displaying based on the

'image-scaling-factor' variable (if Emacs supports scaling the images in question).

8.25.2 It's now possible to specify aspect-ratio preserving combinations

of :width/:max-height and :height/:max-width keywords. In either case, the "max" keywords win. (Previously some combinations would, depending on the aspect ratio of the image, just be ignored and in other instances this would lead to the aspect ratio not being preserved.)

8.25.3 Images inserted with 'insert-image' and related functions get a

keymap put into the text properties (or overlays) that span the image. This keymap binds keystrokes for manipulating size and rotation, as well as saving the image to a file. These commands are also available in 'image-mode'.

8.25.4 A new library for creating and manipulating SVG images has been

added. See the "(elisp) SVG Images" section in the ELisp reference manual for details.

8.25.5 New setf-able function to access and set image parameters is

provided: 'image-property'.

8.25.6 New commands 'image-scroll-left' and 'image-scroll-right'

for 'image-mode' that complement 'image-scroll-up' and 'image-scroll-down': they have the same prefix arg behavior and stop at image boundaries.

8.26 Image-Dired

8.26.1 Now provides a minor mode 'image-dired-minor-mode' which replaces

the function 'image-dired-setup-dired-keybindings'.

8.26.2 Thumbnail generation is now asynchronous.

The number of concurrent processes is limited by the variable 'image-dired-queue-active-limit'.

8.26.3 'image-dired-thumbnail-storage' has a new option 'standard-large'

for generating 256x256 thumbnails according to the Thumbnail Managing Standard.

8.26.4 Inherits movement keys from 'image-mode' for viewing full images.

This includes the usual char, line, and page movement commands.

8.26.5 All the -options types have been changed to argument lists

instead of shell command strings. This change affects 'image-dired-cmd-create-thumbnail-options', 'image-dired-cmd-create-temp-image-options', 'image-dired-cmd-rotate-thumbnail-options', 'image-dired-cmd-rotate-original-options', 'image-dired-cmd-write-exif-data-options', 'image-dired-cmd-read-exif-data-options', and introduces 'image-dired-cmd-pngnq-options', 'image-dired-cmd-pngcrush-options', 'image-dired-cmd-create-standard-thumbnail-options'.

8.26.6 Recognizes more tools by default, including pngnq-s9 and OptiPNG.

8.26.7 'find-file' and related commands now work on thumbnails and

displayed images, providing a default argument of the original file name via an addition to 'file-name-at-point-functions'.

8.27 The default 'Info-default-directory-list' no longer checks some obsolete

directory suffixes (gnu, gnu/lib, gnu/lib/emacs, emacs, lib, lib/emacs) when searching for info directories.

8.28 The commands that add ChangeLog entries now prefer a VCS root directory

for the ChangeLog file, if none already exists. Customize 'change-log-directory-files' to nil for the old behavior.

8.29 Support for non-string values of 'time-stamp-format' has been removed.

8.30 Message

8.30.1 'message-use-idna' now defaults to t (because Emacs comes with

built-in IDNA support now).

8.30.2 When sending HTML messages with embedded images, and you have

exiftool installed, and you rotate images with EXIF data (i.e., JPEGs), the rotational information will be inserted into the outgoing image in the message. (The original image will not have its orientation affected.)

8.30.3 The 'message-valid-fqdn-regexp' variable has been removed, since

there are now top-level domains added all the time. Message will no longer warn about sending emails to top-level domains it hasn't heard about.

8.30.4 'message-beginning-of-line' (bound to 'C-a') understands folded headers.

In 'visual-line-mode' it will look for the true beginning of a header while in non-'visual-line-mode' it will move the point to the indented header's value.

8.31 Package

8.31.1 The new variable 'package-gnupghome-dir' has been added to control

where the GnuPG home directory (used for signature verification) is located and whether GnuPG's option '-homedir' is used or not.

8.31.2 Deleting a package no longer respects 'delete-by-moving-to-trash'.

8.32 Python

8.32.1 The new variable 'python-indent-def-block-scale' has been added.

It controls the depth of indentation of arguments inside multi-line function signatures.

8.33 Tramp

8.33.1 The method part of remote file names is mandatory now.

A valid remote file name starts with `"/method:host:"` or `"/method:user@host:"`.

8.33.2 The new pseudo method "-" is a marker for the default method.

`"/-:"` is the shortest remote file name then.

8.33.3 The command 'tramp-change-syntax' allows you to choose an

alternative remote file name syntax.

8.33.4 New connection method "sg", which supports editing files under a

different group ID.

8.33.5 New connection method "doas" for OpenBSD hosts.

8.33.6 New connection method "gdrive", which allows access to Google

Drive onsite repositories.

8.33.7 Gateway methods in Tramp have been removed.

Instead, the Tramp manual documents how to configure ssh and PuTTY accordingly.

8.33.8 Setting the "ENV" environment variable in

'tramp-remote-process-environment' enables reading of shell initialization files.

8.33.9 Tramp is able now to send SIGINT to remote asynchronous processes.

8.33.10 Variable 'tramp-completion-mode' is obsoleted.

8.34 'auto-revert-use-notify' is set back to t in 'global-auto-revert-mode'.

8.35 JS mode

8.35.1 JS mode now sets 'comment-multi-line' to t.

8.35.2 New variable 'js-indent-align-list-continuation', when set to nil,

will not align continuations of bracketed lists, but will indent them by the fixed width 'js-indent-level'.

8.36 CSS mode

8.36.1 Support for completing attribute values, at-rules, bang-rules,

HTML tags, classes and IDs using the 'completion-at-point' command. Completion candidates for HTML classes and IDs are retrieved from open HTML mode buffers.

8.36.2 CSS mode now binds 'C-h S' to a function that will show

information about a CSS construct (an at-rule, property, pseudo-class, pseudo-element, with the default being guessed from context). By default the information is looked up on the Mozilla Developer Network, but this can be customized using 'css-lookup-url-format'.

8.36.3 CSS colors are fontified using the color they represent as the

background. For instance, #ff0000 would be fontified with a red background.

8.37 Emacs now supports character name escape sequences in character and

string literals. The syntax variants 'character name' and 'U+code' are supported.

8.38 Prog mode has some support for multi-mode indentation.

This allows better indentation support in modes that support multiple programming languages in the same buffer, like literate programming environments or ANTLR programs with embedded Python code.

A major mode can provide indentation context for a sub-mode. To support this, modes should use 'prog-first-column' instead of a literal zero and avoid calling 'widen' in their indentation functions. See the node "(elisp) Mode-Specific Indent" in the ELisp manual for more details.

8.39 ERC

8.39.1 New variable `'erc-default-port-tls'` used to connect to TLS IRC

servers.

8.40 URL

8.40.1 The new function `'url-cookie-delete-cookie'` can be used to programmatically delete all cookies, or cookies from a specific domain.

8.40.2 `'url-retrieve-synchronously'` now takes an optional timeout parameter.

8.40.3 The URL package now supports HTTPS over proxies supporting CONNECT.

8.40.4 `'url-user-agent'` now defaults to `'default'`, and the User-Agent

string is computed dynamically based on `'url-privacy-level'`.

8.41 VC and related modes

8.41.1 `'vc-dir-mode'` now binds `'vc-log-outgoing'` to `'O'`; and has various

branch-related commands on a keymap bound to `'B'`.

8.41.2 `'vc-region-history'` is now bound to `'C-x v h'`, replacing the older

`'vc-insert-headers'` binding.

8.41.3 New user option `'vc-git-print-log-follow'` to follow renames in Git logs

for a single file.

8.42 CC mode

8.42.1 Opening a .h file will turn C or C++ mode depending on language used.

This is done with the help of the 'c-or-c++-mode' function, which analyzes buffer contents to infer whether it's a C or C++ source file.

8.43 New option 'cpp-message-min-time-interval' to allow user control

of progress messages in cpp.el.

8.44 New DNS mode command 'dns-mode-ipv6-to-nibbles' to convert IPv6 addresses

to a format suitable for reverse lookup zone files.

8.45 Ispell

8.45.1 Enchant is now supported as a spell-checker.

Enchant is a meta-spell-checker that uses providers such as Hunspell to do the actual checking. With it, users can use spell-checkers not directly supported by Emacs, such as Voikko, Hspell and AppleSpell, more easily share personal word-lists with other programs, and configure different spelling-checkers for different languages. (Version 2.1.0 or later of Enchant is required.)

8.46 Flymake

8.46.1 Flymake has been completely redesigned

Flymake now annotates arbitrary buffer regions, not just lines. It supports arbitrary diagnostic types, not just errors and warnings (see variable 'flymake-diagnostic-types-alist').

It also supports multiple simultaneous backends, meaning that you can check your buffer from different perspectives (see variable 'flymake-diagnostic-functions'). Backends for Emacs Lisp mode are provided.

The old Flymake behavior is preserved in the so-called "legacy backend", which has been updated to benefit from the new UI features.

8.47 Term

8.47.1 term-char-mode 模式下的 buffer 默认为只读模式

这个 buffer 默认设置为只读模式主要防止其他除了程序过滤器之外的任何对其进行修改的行为；并且光标的移动也在有所限制，主要用为了保持每次命令执行后光标都处理“当前”位置。这也是为了在交互式命令中使得 emacs 更加方便获取其状态。

可以通过 **term-char-mode-buffer-read-only** 来控制 buffer 是否为只读，Emacs 26 以后这个值默认设置不为 nil，如果想关闭只读，设置其值为 nil 就行。同理可以通过另一个变量，即：**term-char-mode-point-at-process-mark** 来控制光标是否可上下移动，其默认值不是 nil。如果想让光标能上下移动，设置这个值为 nil。

8.48 Xref

8.48.1 When an xref buffer is needed, 'TAB' quits and jumps to an xref.

A new command 'xref-quit-and-goto-xref', bound to 'TAB' in **xref** buffers, quits the window before jumping to the destination. In many situations, the intended window configuration is restored, just as if the **xref** buffer hadn't been necessary in the first place.

9 Emacs 26.1 新的模式和包

9.1 新的 Elisp 数据结构库 radix-tree

9.2 New library 'xdg' with utilities for some XDG standards and specs.

9.3 HTML

9.3.1 A new submode of 'html-mode', 'mhtml-mode', is now the default

mode for *.html files. This mode handles indentation, fontification, and commenting for embedded JavaScript and CSS.

9.4 New mode 'conf-toml-mode' is a sub-mode of 'conf-mode', specialized

for editing TOML files.

9.5 New mode 'conf-desktop-mode' is a sub-mode of 'conf-unix-mode',

specialized for editing freedesktop.org desktop entries.

9.6 New minor mode 'pixel-scroll-mode' provides smooth pixel-level scrolling.

9.7 New major mode 'less-css-mode' (a minor variant of 'css-mode') for

editing Less files.

9.8 New package 'auth-source-pass' integrates 'auth-source' with the

password manager password-store (<http://passwordstore.org>).

10 Emacs 26.1 中不兼容的 Lisp 部分说明

10.1 'password-data' is now a hash-table so that 'password-read' can use

any object for the 'key' argument.

10.2 Command 'dired-mark-extension' now automatically prepends a '.' to the

extension when not present. The new command 'dired-mark-suffix' behaves similarly but it doesn't prepend a '.'.

10.3 Certain cond/pcase/cl-case forms are now compiled using a faster jump

table implementation. This uses a new bytecode op 'switch', which isn't compatible with previous Emacs versions. This functionality can be disabled by setting 'byte-compile-cond-use-jump-table' to nil.

10.4 If 'comment-auto-fill-only-comments' is non-nil, 'auto-fill-function'

is now called only if either no comment syntax is defined for the current buffer or the self-insertion takes place within a comment.

10.5 The alist 'ucs-names' is now a hash table.

10.6 'if-let' and 'when-let' now support binding lists as defined by the

SRFI-2 (Scheme Request for Implementation 2).

10.7 'C-up', 'C-down', 'C-left' and 'C-right' are now defined in term

mode to send the same escape sequences that xterm does. This makes things like 'forward-word' in readline work.

10.8 Customizable variable 'query-replace-from-to-separator'

now doesn't propertize the string value of the separator. Instead, text properties are added by 'query-replace-read-from'. Additionally, the new nil value restores pre-24.5 behavior of not providing replacement pairs via the history.

10.9 Some obsolete functions, variables, and faces have been removed:

10.9.1 'make-variable-frame-local'. Variables cannot be frame-local any more.

10.9.2 From subr.el: 'window-dot', 'set-window-dot', 'read-input', 'show-buffer', 'eval-current-buffer', 'string-to-int'.

10.9.3 'incomplete-prospects-length'.

10.9.4 All the default-FOO variables that hold the default value of the

FOO variable. Use 'default-value' and 'setq-default' to access and change FOO, respectively. The exhaustive list of removed variables is: 'default-mode-line-format', 'default-header-line-format', 'default-line-spacing', 'default-abbrev-mode', 'default-ctl-arrow', 'default-truncate-lines', 'default-left-margin',

'default-tab-width', 'default-case-fold-search', 'default-left-margin-width', 'default-right-margin-width', 'default-left-fringe-width', 'default-right-fringe-width', 'default-fringes-outside-margins', 'default-scroll-bar-width', 'default-vertical-scroll-bar', 'default-indicate-empty-lines', 'default-indicate-buffer-boundaries', 'default-fringe-indicator-alist', 'default-fringe-cursor-alist', 'default-scroll-up-aggressively', 'default-scroll-down-aggressively', 'default-fill-column', 'default-cursor-type', 'default-cursor-in-non-selected-windows', 'default-buffer-file-coding-system', 'default-major-mode', and 'default-enable-multibyte-characters'.

10.9.5 Many variables obsoleted in 22.1 referring to face symbols.

10.10 The variable 'text-quoting-style' is now a customizable option. It

controls whether to and how to translate ASCII quotes in messages and help output. Its possible values and their semantics remain unchanged from Emacs 25. In particular, when this variable's value is 'grave', all quotes in formats are output as-is.

10.11 Functions like 'check-declare-file' and 'check-declare-directory'

now generate less chatter and more-compact diagnostics. The auxiliary function 'check-declare-errmsg' has been removed.

10.12 The regular expression character class '[:blank:]' now matches

Unicode horizontal whitespace as defined in the Unicode Technical Standard #18. If you only want to match space and tab, use '[[^]]' instead.

10.13 'min' and 'max' no longer round their results.

Formerly, they returned a floating-point value if any argument was floating-point, which was sometimes numerically incorrect. For example, on a 64-bit host (max 1e16 10000000000000001) now returns its second argument instead of its first.

10.14 The variable 'old-style-backquotes' has been made internal and

renamed to 'lread-old-style-backquotes'. No user code should use this variable.

10.15 'default-file-name-coding-system' now defaults to a coding system

that does not process CRLF. For example, it defaults to 'utf-8-unix' instead of to 'utf-8'. Before this change, Emacs would sometimes mishandle file names containing these control characters.

10.16 'file-attributes', 'file-symlink-p' and 'make-symbolic-link' no

longer quietly mutate the target of a local symbolic link, so that Emacs can access and copy them reliably regardless of their contents. The following changes are involved.

10.16.1 'file-attributes' and 'file-symlink-p' no longer prepend "/" to

symbolic links whose targets begin with "/" and contain ":". For example, if a symbolic link "x" has a target "y:z:", '(file-symlink-p "x")' now returns *"/y:z:" rather than ":/y:z:"*.

10.16.2 'make-symbolic-link' no longer looks for file name handlers of

target when creating a symbolic link. For example, '(make-symbolic-link *"/y:z:" "x"*)' now creates a symbolic link to *"/y:z:"* instead of failing.

10.16.3 'make-symbolic-link' removes the remote part of a link target if

target and newname have the same remote part. For example, '(make-symbolic-link *"/x:y:a" "/x:y:b"*)' creates a link with the literal string "a"; and '(make-symbolic-link *"/x:y:a" "/x:z:b"*)' creates a link with the literal string *"/x:y:a"* instead of failing.

10.16.4 'make-symbolic-link' now expands a link target with leading "~"

only when the optional third arg is an integer, as when invoked interactively. For example, '(make-symbolic-link "~y" "x")' now creates a link with target the literal string "~y"; to get the old behavior, use '(make-symbolic-link (expand-file-name "~y") "x")'. To avoid this expansion in interactive use, you can now prefix the link target with ":". *For example, '(make-symbolic-link ":~y" "x" 1)' now creates a link to literal "~y".*

10.17 'file-truename' returns a quoted file name if the target of a

symbolic link has remote file name syntax.

10.18 Module functions are now implemented slightly differently; in

particular, the function 'internal-module-call' has been removed. Code that depends on undocumented internals of the module system might break.

10.19 The argument LOCKNAME of 'write-region' is propagated to file name

handlers now.

10.20 When built against recent versions of GTK+, Emacs always uses

gtk_{windowmove} for moving frames and ignores the value of the variable 'x-gtk-use-window-move'. The variable is now obsolete.

10.21 Several functions that create or rename files now treat their

destination argument specially only when it is a directory name, i.e., when it ends in '/' on GNU and other POSIX-like systems. When the destination argument D of one of these functions is an existing directory and the intent is to act on an entry in that directory, D should now be a directory name. For example, (rename-file "e" "f/") renames to 'f/e'. Although this formerly happened sometimes even when D was not a directory name, as in (rename-file "e" "f") where 'f' happened to be a directory, the old behavior

often contradicted the documentation and had inherent races that led to security holes. A call like `(rename-file C D)` that used the old, undocumented behavior can be written as `(rename-file C (file-name-as-directory D))`, a formulation portable to both older and newer versions of Emacs. Affected functions include `'add-name-to-file'`, `'copy-directory'`, `'copy-file'`, `'format-write-file'`, `'gnus-copy-file'`, `'make-symbolic-link'`, `'rename-file'`, `'thumbs-rename-images'`, and `'write-file'`.

10.22 The list returned by `'overlays-at'` is now in decreasing priority order.

The documentation of this function always said the order should be that of decreasing priority, if the 2nd argument of the function is non-nil, but the code returned the list in the increasing order of priority instead. Now the code does what the documentation says it should do.

10.23 `'format'` now avoids allocating a new string in more cases.

`'format'` was previously documented to return a newly-allocated string, but this documentation was not correct, as `(eq x (format x))` returned t when x was the empty string. `'format'` is no longer documented to return a newly-allocated string, and the implementation now takes advantage of the doc change to avoid making copies of strings in common cases like `(format "foo")` and `(format "%s" "foo")`.

10.24 The function `'eldoc-message'` now accepts a single argument.

Programs that called it with multiple arguments before should pass them through `'format'` first. Even that is discouraged: for ElDoc support, you should set `'eldoc-documentation-function'` instead of calling `'eldoc-message'` directly.

10.25 Using `'&rest'` or `'&optional'` incorrectly is now an error.

For example giving `'&optional'` without a following variable, or passing `'&optional'` multiple times:

```
(defun foo (&optional &rest x)) (defun bar (&optional &optional x))
```

Previously, Emacs would just ignore the extra keyword, or give incorrect results in certain cases.

10.26 The pinentry.el library has been removed.

That package (and the corresponding change in GnuPG and pinentry) was intended to provide a way to input passphrase through Emacs with GnuPG 2.0. However, the change to support that was only implemented in GnuPG ≥ 2.1 and didn't get backported to GnuPG 2.0. And with GnuPG 2.1 and later, pinentry.el is not needed at all. So the library was useless, and we removed it. GnuPG 2.0 is no longer supported by the upstream project.

To adapt to the change, you may need to set 'epa-pinentry-mode' to the symbol 'loopback'. Alternatively, leave 'epa-pinentry-mode' at its default value of nil, and remove the 'allow-emacs-pinentry' setting from your 'gpg-agent.conf' configuration file, usually found in the '~/.gnupg' directory.

Note that previously, it was said that passphrase input through minibuffer would be much less secure than other graphical pinentry programs. However, these days the difference is insignificant: the 'read-password' function sufficiently protects input from leakage to message logs. Emacs still doesn't use secure memory to protect passphrases, but it was also removed from other pinentry programs as the attack is unrealistic on modern computer systems which don't utilize swap memory usually.

11 Emacs 26.1 中 Lisp 的变化

11.1 函数 assoc 接受一个可选的第三位参数 TESTFN，当这个参数不为 nil 时，其用于比较而不是相等

11.2 New optional argument TESTFN in 'alist-get', 'map-elt' and 'map-put'.

If non-nil, the argument specifies a function to use for comparison, instead of, respectively, 'assq' and 'eql'.

11.3 New function 'seq-set-equal-p' to check if SEQUENCE1 and SEQUENCE2

contain the same elements, regardless of the order.

11.4 The new function 'mapbacktrace' applies a function to all frames of

the current stack trace.

11.5 The new function 'file-name-case-insensitive-p' tests whether a

given file is on a case-insensitive filesystem.

11.6 Several accessors for the value returned by 'file-attributes'

have been added. They are: 'file-attribute-type', 'file-attribute-link-number', 'file-attribute-user-id', 'file-attribute-group-id', 'file-attribute-access-time', 'file-attribute-modification-time', 'file-attribute-status-change-time', 'file-attribute-size', 'file-attribute-modes', 'file-attribute-inode-number', 'file-attribute-device-number' and 'file-attribute-collect'.

11.7 The new function 'buffer-hash' computes a fast, non-consing hash of

a buffer's contents.

11.8 'interrupt-process' now consults the list 'interrupt-process-functions',

to determine which function has to be called in order to deliver the SIGINT signal. This allows Tramp to send the SIGINT signal to remote asynchronous processes. The hitherto existing implementation has been moved to 'internal-default-interrupt-process'.

11.9 The new function 'read-multiple-choice' prompts for multiple-choice

questions, with a handy way to display help texts.

11.10 'comment-indent-function' values may now return a cons to specify a

range of indentation.

11.11 New optional argument TEXT in 'make-temp-file'.

11.12 New function 'define-symbol-prop'.

11.13 New function 'secure-hash-algorithms' to list the algorithms that

'secure-hash' supports. See the node "(elisp) Checksum/Hash" in the ELisp manual for details.

11.14 Emacs now exposes the GnuTLS cryptographic API with the functions

'gnutls-macs' and 'gnutls-hash-mac'; 'gnutls-digests' and 'gnutls-hash-digest'; 'gnutls-ciphers' and 'gnutls-symmetric-encrypt' and 'gnutls-symmetric-decrypt'. See the node "(elisp) GnuTLS Cryptography" in the ELisp manual for details.

11.15 The function 'gnutls-available-p' now returns a list of capabilities

supported by the GnuTLS library used by Emacs.

11.16 Emacs now supports records for user-defined types, via the new

functions 'make-record', 'record', and 'recordp'. Records are now used internally to represent cl-defstruct and defclass instances, for example.

If your program defines new record types, you should use package-naming conventions for naming those types. This is so any potential conflicts with other types are avoided.

11.17 'save-some-buffers' now uses 'save-some-buffers-default-predicate'

to decide which buffers to ask about, if the PRED argument is nil. The default value of 'save-some-buffers-default-predicate' is nil, which means ask about all file-visiting buffers.

- 11.18 `string-(to|as|make)-(uni|multi)byte` 被声明为废弃
- 11.19 新变量 `while-no-input-ignore-events` 用于设置哪些特定的 `while-no-input` 事件可以被忽略, 它的值是一个 `symbol` 的列表
- 11.20 新增函数 `undo-amalgamate-change-group` 去除两个状态 `undo` 之间的边界
- 11.21 新变量 `definition-prefixes` 是有相应文件定义的哈希表的映射前缀, 可用于获取那些还没加载的定义 (如 `C-h f`)。
- 11.22 新变量 `syntax-ppss-table` 用于在 `syntax-ppss` 控制 `syntax-table`
- 11.23 `define-derived-mode` 可指定一个 `:after-hook` 形式, 当新的 `mode` 的 `hook` 被执行后它将被求值, 可用于在 `mode` 启动时, `mode-hook` 引起配置发生变化的情况
- 11.24 自动加载产生的文件名不包含时间戳, 可通过设置变量 `autoload-timestamps` 的值不是 `nil` 产生时间戳
- 11.25 `gnutls-boot` 接受一个参数 `complete-negotiation`, 表示即使在非阻塞的 `socket` 链接里协商应该完成
- 11.26 新增变量 `flyspell-sort-corrections-function`, 它是 `flyspell.el` 库里的变量, 用于排序修正
- 11.27 新增命令 `fortune-message` 用于在 `echo` 区域显示名言警句
- 11.28 新增函数 `func-arity` 返回任意函数的参数列表信息, 用于替代之前的 `subr-arity`
- 11.29 新增函数 `region-bounds` 用于交互情境, 主要用于提供区域边界 (超过一个的长方形区域), 只需要传递一个参数, 取代之前的两个参数 (`region-beginning` 和 `region-end`)
- 11.30 `parse-partial-sexp` 函数的返回列表新增一种元素, 元素 10。当最后一个被扫描的字符可能是两个结构字符的第一个字符时, 如注释符, 这个元素的值就是最一个字符的语法值
- 11.31 `parse-partial-sexp` 函数返回列表的第 9 个元素作为固定返回元素, 可用于 `Lisp` 编程。它的值是括号所含位置的列表, 从最外层开始。
- 11.32 `read-color` 在将颜色作为背景色时将显示颜色名
- 11.33 函数 `redirect-debugging-output` 可在非 `GNU/Linux` 平台上运行
- 11.34 新增函数 `string-version-lessp` 比较两个字符串, 这里会把不连续的数字解析成数值, 然后进行比较例如 `"foo2.png"` 比 `"foo12.png"` 小
- 11.35 数值比较和 `logb` 操作由于内部数据的取位操作, 不再返回精确值。例如 (`< most-positive-fixnum (+ 1.0 most-`

11.56 新增错误类型 `file-missing` 作为 `file-error` 子类型

如果操作不存在的文件，将采用这种错误类型取代之前的 `file-error` 这种错误类型

11.57 `delete-directory` 函数的变化

当递归操作进行时，同时有其他进程在执行 `delete-directory` 前删除了目录或者文件时，不再抛错误异常。

11.58 新的错误类型 `user-search-failed`，与 `search-failed` 类似，但像 `user-error` 一样禁止高度机制

11.59 函数 `line-number-at-pos` 的变化

函数 `line-number-at-pos` 支持传递第二个可选参数 `absolute`。如果这个参数为 `nil`，默认将返回包含收缩 (`potential narrowing`) 的行号。如果这个参数不为 `nil`，它将不考虑收缩情况，返回绝对的行号。

11.60 函数 `color-distance` 的调整

函数 `color-distance` 在新版本支持第二个可选参数 `metric`。当这个参数不为 `nil` 时，它将接收两个参数 (两个颜色值) 返回一个距离值。

11.61 Frame 和 Window 操作

11.61.1 调整 frame 大小方式的改变

请使用 `window-size-change-functions` 代替老的 `window-configuration-change-hook`。

11.61.2 Frame 大小是否被调整

判断 Frame 是否被调整可使用新函数 `frame-size-changed-p`。这里的大小是否被调整过是从上一次调用 `window-size-change-functions` 算起。

11.61.3 函数 `frame-geometry` 也会返回 frame 的外边界宽度

11.61.4 新增部分 frame 相关参数及老参数一些语义变化

1. `'z-group'` 将 frame 置于其他之上或之下
2. `'min-width'` 和 `'min-height'` 用于指定 frame 的绝对最小范围

3. 'parent-frame' 使得一个 frame 成为另一个 frame 的子 frame。详情请参见 Elisp 手册的 Elisp 子 frames 部分
4. 'delete-before' 在删除一个 frame 前触发删除另一个
5. 'mouse-wheel-frame' 指定另一个 frame 的窗口可滚动
6. 'no-other-frame' 新增 'next-frame' 和 'previous-frame' 跳过当前 frame
7. 'skip-taskbar' 从任务条 (taskbar) 中删除 frame 的图标, 同时, 可通过 'Alt-<TAB>' 跳过这个 frame
8. 'no-focus-on-map' 避免一个规划过的 frame 获得输入选中
9. 'no-accept-focus' 表示 frame 不希望通过鼠标获得输入选中
10. 'undecorated' 从 frame 中移除窗口管理样式
11. 'override-redirect' 让窗口管理忽视当前 frame
12. 'width' and 'height' 支持按比例指定和按像素值
13. 'left' and 'top' 支持按比例指定
14. 'keep-ratio' 当父 frame 被调整时, 保持子 frame 的大小和位置不变
15. no-special-glyphs 在 frame 中将覆盖截断和连续符号的显示
16. auto-hide-function 和 minibuffer-exit 分别用于处理自动隐藏 frame 和从 minibuffer 中退出
17. fit-frame-to-buffer-margins 和 fit-frame-to-buffer-sizes 用于处理 frame 对其 buffer 的大小适应
18. drag-internal-border, drag-with-header-line, drag-with-mode-line, snap-width, top-visible and bottom-visible 允许通过拖拽来调整 frame 的大小
19. minibuffer 当初始值被指定为 nil 时, 设置为默认的 minibuffer 窗口

11.61.5 新增函数 frame-list-z-order 返回按 z(栈) 顺序的 frame 列表

11.61.6 函数 'x-focus-frame' 不激活它的 frame 变成可选项

11.61.7 变量 focus-follows-mouse 增加第三个有意义的值 auto-raise
这个值用于当鼠标进入 frame 时, 标明窗口管理自动聚焦这个 frame。

11.61.8 新增函数 frame-restack, 用于调整 frame 的层级关系

11.61.9 新增 internal-border 用于指定 frame 的外部边界背景

11.61.10 select-window 函数 NORECORD 参数增加 mark-for-redisplay 选项

这个选项类似其他不是 nil 的值, 但它标记窗口 (WINDOW) 重新显示

11.61.11 正式支持对边窗 (side windows)

显示操作函数 display-buffer-in-side-window 可将 buffer 显示在边空上。更从详情请参考 ELisp 手册里的边窗口部分。

11.61.12 支持原子窗口

更从详情请参考 ELisp 手册里的原子窗口部分

11.61.13 新增 display-buffer 列表项 window-parameters

分配给要展示 buffer 的窗口参数

11.61.14 新增函数 display-buffer-reuse-mode-window

这个函数是一个交互函数, 适用在 display-buffer-alist。例如, 当打开一个帮助手册, 为了避免再次创建一个已经存在的窗口, 可用这个机制完成。

```
(add-to-list 'display-buffer-alist
  '("\`\\`\\*Man .*\\*\\`" .
    (display-buffer-reuse-mode-window
      (inhibit-same-window . nil)
      (mode . Man-mode))))
```

11.61.15 新窗口参数 no-delete-other-windows

防止窗口被 delete-other-windows 命令删除掉

11.61.16 新窗口参数 mode-line-format 和 header-line-format

这两个参数允许 buffer 本地 (buffer-local) 修改进行覆盖。

11.61.17 新增命令 window-swap-states

这个命令用于交换两个打开的 windows 的状态 (选中和被选中), 这个方法常用于当前只有两个窗口时, 交换两个窗口的内容。

11.61.18 新增 window-pixel-width-before-size-change 和 window-pixel-height-before-size-change 函数

用于当 window-size-change-functions 运行里，检测哪个窗口大小发生了变化

11.61.19 新增函数 window-lines-pixel-dimensions 用于返回一个窗口文本行的像素大小

11.61.20 新增函数 window-largest-empty-rectangle 用于返回在窗口里没有文本区域最大矩形大小

11.61.21 函数'mouse-autoselect-window' 语义微调

详情参考 Elisp 手册里的"(elisp) Mouse Window Auto-selection" 函数。

11.61.22 'select-frame-by-name' 在当前的显示器里无法找到一个匹配的 frame，可返回一个在其他显示器上的 frame

11.62 'tcl-auto-fill-mode' 已经声明废弃

这个函数的功能可通过设置 comment-auto-fill-only-comments 来实现。

11.63 新增 pcase 模式'rx' 用于匹配 rx 风格的正则表达式

详情请参考'rx-pcase-macroexpander' 函数文档。

11.64 新增区域二次选择函数

新增加函数'secondary-selection-to-region' 和'secondary-selection-from-region'，满足用户再次设置区间的开始和结束。

11.65 新增函数'lgstring-remove-glyph'

这个函数于用修改底层布局引擎（如 m17n-flt, uniscribe）返回的 gstring。

12 Emacs 26.1 在一些特殊模式和包中的变化

12.1 在 Windows7& 以上系统对快捷键的捕获性能更好

新的键盘钩子代码 (hooking code) 更加准确捕获系统快捷键如'Win-*' 和'Alt-TAB'，通过这种方式，Emacs 比系统更早地获取按键事件。这使得'w32-register-hot-key' 函数功能违背了所有 Windows7 开始的原意功能。Windows

NT 及之后版本可以注册任务快捷键的组合。(在 Windows 9X, 之前的限制, 在 Emacs 的手册里已经说明了依然需要申请)。

12.2 'convert-standard-filename' 函数的变化

在 MS-Windows 系统中'convert-standard-filename' 函数不再将斜线 (/) 替换成反斜线 (\)。老版本在 *MS-Windows* 系统中这个函数将文件名里的斜线 (/) 强制转成反斜线 (\)。因为不再这样做, 如果你 Lisp 代码里使用了 **convert-standard-filename** 这个函数去做这个变化, 你需要自己手工处理一下这块的代码。如按照如下方式:

```
(let ((start 0))
  (while (string-match "/" file-name start)
    (aset file-name (match-beginning 0) "\\")
    (setq start (match-end 0))))
```

12.3 MS-Windows 平台下的 GUI 会话像 Posix 平台一样将被当作 SIGINT

Ctrl-C (SIGINT) 信号在 MS-Windows 平台 GUI 的效果与 Posix 平台一样: Emacs 保存会话然后退出。譬如, 如果你在 Windows shell 里启动 emacs.exe 程序, 然后在 shell 窗口里按下 Ctrl-C, 也会产生同样效果。

12.4 Windows XP 及以后系统'signal-process' 支持 SIGTRAP

在 Windows 系统下对'kill' 的仿真映射到 SIGTRAP 信号去调用'DebugBreakProcess' 接口。这会导致检索程序终止执行, 然后把控制权交给调试者(debugger)。如果没有调试者绑定到搜索程序, 这个调用将被忽略。这跟 POSIX 系统的默认行为形成对比, POSIX 系统是终止检索程序的执行(终止前会做一次 core dump)。

12.5 macOS 系统里的一些小优化

1. 修复在 macOS 系统里'set-mouse-position' 和'set-mouse-absolute-pixel-position' 命令不生效问题;
2. 在 macOS 系统, 从命令行中也可打开 Emacs GUI 程序;
3. macOS 10.9+ 'ns-appearance' 和'ns-transparent-titlebar' 改变 frame 的显示;
4. macOS 10.8+ 系统里使用'ns-use-thin-smoothing' 开启瘦字段更加柔和;

5. Darwin 系统'process-attributes' 返回更多信息；
6. macOS 10.7+ 鼠标方向键和触摸板的滚动效果表现更加与原生系统相同，新增变量'ns-mwheel-line-height'、'ns-use-mwheel-acceleration'和'ns-use-mwheel-momentum' 用来定制化这些行为。

13 GNU Emacs 协议声明原文
